(a)
single seed, $d = 12$
$\beta = 1$
$\beta = 2$
$\beta = 3$
fraction with $R(\infty) > 0.05$
linearization
triangles: household $\lambda_c(\beta)$
λ
(b)
single seed, $d = 3$
$\beta = 0$
$\beta = 1$
$\beta = 3$
mean outbreak size
λ
$\times 10^{-3}$
(c)
single seed, $d = 12$
$\beta = 0$
$\beta = 1$
$\beta = 3$
λ
$\times 10^{-3}$
